

GENERAL PRODUCT DESCRIPTION

Protecta® FR Graphite Plate is a preformed self-adhesive intumescent plate, used to reinstate the fire resistance performance of flexible wall constructions when punctured with plastic wall boxes. It is used where the walls have been provided with apertures for the penetration of conduits and cables into socket boxes, on one or both sides of the wall.

The graphite plate immediately reacts to fire through the heat and automatically expands and fills the box, preventing fire from passing through.

Fitting Protecta® FR Graphite Plate will reinstate the fire resistance performance of flexible wall constructions for up to 120 minutes. It also prevents the passage of fire through the electrical conduits between socket boxes.

PROPERTIES

- Wall boxes can be fitted back to back
- Boxes can be fitted to steel and timber noggins
- Up to 120 minutes of both integrity and insulation resistance
- Quick and easy to install
- For flexible walls with a minimum thickness of 75 mm
- Can be used on insulated and uninsulated walls
- Tested with a wide range of cables and conduits interconnected between boxes
- Tested with empty conduits between boxes for future cable transits
- High end fast expanding patented graphite material
- No emissions - environmentally and user friendly
- Unlimited storage time (under correct conditions)
- 50 years working life

GENERAL GUIDE

Minimum separations and limitations: Socket boxes can be fitted back to back or side by side – one fitted to each face, and may also be used in the situation where a socket box penetrates one side of the wall only and the remaining side of the wall is not penetrated at the same point (i.e. the services continues on the inside of the wall). Socket boxes can be placed with zero distance, or further apart.

Supporting constructions: Flexible walls must have a minimum thickness of 75 mm and comprise studs lined on both faces with minimum 1 layer of 12.5 mm thick boards. The supporting construction must be classified in accordance with EN 13501-2 for the required fire resistance period.

INSTALLATION

1. Wall boxes should be installed according to the Manufacturer's Instructions, and can be fixed directly to drywall studs, or to timber noggins or steel plates fixed to studs
2. The aperture around the wall box should be as tightly fitting as possible and any gaps filled with plaster filler, or Protecta® FR Acrylic.
3. Before installing Protecta® FR Graphite Plate ensure that the surfaces are clean and sound, free from dirt, grease and other contamination.
4. Remove the backing paper from the back of the pad.
5. Fit into place inside at the base of the socket box.
6. The pad must not obstruct cable entry.

TEST STANDARDS

This Technical Data Sheet and the Installation Instructions are based on the product's European Technical Assessment issued in accordance with regulation (EU) No 305/2011 on the basis of EAD 350454-00-1104, September 2017, tested to EN 1366-3 in conjunction with EN 1363-1. The product hold the following approval marks; CE-mark for Europe.

TECHNICAL DATA

Technical Approval	EAD 350454-00-1104
Fire Test - EM13501-2	EI 30 - 120
Durability - ISO 8339	Z ₂ intended for use in internal conditions with humidity classes other than Z ₁ , excluding temperatures below 0 °C
Conditioning procedure	EN 13238:2010
Expansion ratio	17:1
Expansion pressure	65.4 N
Colour	Light Grey with silver flecks
Texture	Textured surface
Finish	Matt finish on one side, other side satin finish
Thickness	Approximately 3.8mm
Weight per unit area / length	5.1 Kg/m ²
Density	1,409 Kg/m ³
Optimum expansion time	2 minutes
Optimum expansion temp.	550 °C
Usage	Supplied ready to fit
Packaging	Supplied packed in boxes, normally 10 plates/box
Storage	Store in temperatures between 5 °C and 30 °C
Life	Under normal conditions; 50 years +
